AutoLISP was the first choice for product extension. It is a simple language, but relatively easy to learn, and is still used today by many add-on developers. It's compiler-based and is the source of the command-line compiler, the command-line API, and some of the Visual LISP functionality. Visual LISP is a visual language. It is compiled and user friendly, and offers a programming environment similar to what you would find on a modern Windows or Linux desktop. It is a strong programming language for creating automation and integrating applications. While it was always a second choice, it has become a popular choice over the years for creating add-on products, and is generally used for simple tasks. A specialized version called Visual Studio provides a more powerful environment for advanced coding, but requires programming knowledge. VBA is not a programming language, but a Visual Basic for Applications that can be used to write add-ons for AutoCAD. It is a Microsoft-based scripting language that has a small API. It is used to automate some of the functions of the program, such as moving objects, opening files, and creating, manipulating, and saving drawings. A VBA Add-On can be launched from any other application, or from a command prompt. AutoCAD can be instructed to run a VBA Macro on file load. .NET and ObjectARX are both Microsoft technologies that extend the capabilities of AutoCAD through a platform-independent API. ObjectARX is used to generate AutoLISP code. The.NET API provides a set of classes to manage a COM component which is either a user interface, or a native interface, to the AutoCAD engine. COM automation does not necessarily involve adding-on extensions. For example, it can be used to script using the AutoCAD command line or Excel. AutoCAD uses its native API in addition to its proprietary technology. Methods of integration These include: AutoLISP Visual LISP Python COM .NET VBA HTML5 Application and database integration Application integration or application add-ons Database integration or database add-ons AutoCAD extensions can be divided into several categories: Default and basic Custom and advanced System and database add-ons The default and basic categories are essentially for users who have the basic knowledge and skills to build useful products.
