## What's New In AutoCAD?

“Duplicate Layer” command: AutoCAD 2023 lets you duplicate layers as if they were drawings, and now supports zooming in to specific layers in a drawing or a 2D map. (Video: 6:39 min.) “Change View” command: Assign a new view to all layer-based items in your drawing and keep layer-based objects in one view at a time. “Cancel” and “Apply” commands: When you undo a command or change an option, you have the choice to undo the command only or revert the change to its previous state. If you want to undo a command but keep the change, you can use the “Apply” command. “Copy Style” command: Enable you to copy the style of an object and instantly apply it to a copy of the original. You can also pick one or more objects in your drawing that have the same style and copy that style onto those objects. “Modify” command: A simple but powerful way to make corrections to a drawing. Create a new drawing with no layers. Draw a symbol or text box. Add lines, arrows, arcs, and other primitives as needed. Add more layers, change their styles, and apply the symbol. “Object Browser” command: See a list of all objects in your drawing, including layer-based items and coordinate-based primitives. “Global Proximity” command: Create a new point, rectangle, or line or some other geometric object to mark the last known location of an object, or determine the distance between two objects. “Python” command: Activate a Python shell to explore AutoCAD commands and data types. “Imaginary” command: Convert three dimensional (3D) coordinate system lines to horizontal/vertical lines, which makes it easy to work with 2D drawings. (Video: 2:17 min.) “Object Search” command: Display search results in a new window. “Outliner” command: The Outliner lets you control which parts of the drawing appear onscreen by displaying only those parts in the Outliner window. “Camera” command: Bring a reference into view, or see the plane of the camera, which is helpful when
