****Tutorial**** In this tutorial we will learn how to enhance the sunset glow in an image using a simple technique that makes it look as though sunlight shines through clouds. This tutorial will take us through the steps necessary to achieve a great-looking result. The workflow for this tutorial is as follows: 1. Open a high-quality, in-focus image of a sunset. 2. Create a new layer and load a foreground texture to the layer. 3. Add a gradient to the new layer using a simple Gradient Map. 4. Create a duplicate of the Gradient Map layer by holding down the Ctrl key (Windows) or Command key (Mac) while you click on the layer. 5. Load the Gradient Map over this new layer. 6. Change the color of the layer's color stops. 7. Paint over the new layer with a black layer mask and create a composite adjustment layer from the layer mask. The steps involved in this tutorial are simple and straightforward, and we will be learning new tricks along the way. This tutorial assumes that you are comfortable with Photoshop's workspace and you have a command of Photoshop's interface.

Does being in a prisoner of war camp for more than two years count as torture? Researchers have asked that question after looking at former US POWs, compared with former prisoners of war who were in POW camps for fewer than two years. The analysis was led by researchers at Karolinska Institutet in Sweden. It was published in the American Journal of Psychiatry. Only some mental disorders, such as post-traumatic stress disorder, can be known to psychiatrists or therapists. Researchers from the Institute of Mental Health in Britain aimed to see how common mental disorders in former US POWs would compare with the prevalence of mental disorders in different populations. The researchers analysed the medical records of nearly 30,000 former prisoners of war. They found that while there was a higher than average number of mental disorders in former US POWs, the rates were similar to the rates found in an older group of prisoners of war and in a younger population of incarcerated US prisoners. A high number of previous mental disorders, however, meant that risk of mental disorders was higher in former US POWs. The rates were similar to the rates found in an older group of prisoners of war and a younger population of incarcerated US prisoners. POW-related diseases Previous mental illnesses included post-traumatic stress disorder (PTSD), depression, schizophrenia, alcoholism, substance abuse, personality disorders and bipolar disorder. Lead researcher Dr Laura Kaster said: "Conducted within a carefully controlled environment using a cohort of well-defined samples, these results contribute to evidence that health care providers caring for former prisoners of war should pay close attention to mental health issues, including a strong emphasis on PTSD." Conducted within a carefully controlled environment using a cohort of well-defined samples, these results contribute to evidence that health care providers caring for former prisoners of war should pay close attention to mental health issues Dr Kaster added: "Our study may not be representative of all former prisoners of war, as we evaluated only those who had been in a POW camp for a minimum of two years. "But even this group of prisoners of war was at increased risk of mental disorders, and few of these had been treated by mental health professionals prior to incarceration." The research is part of a large United Nations study on the health conditions of prisoners of war. According to the findings, of those former prisoners of war who were captured in 1945, 22% developed mental

This was as she arrived at the Duchy of Cornwall Christmas party, where she talked to guests at the Pleydell-Bouverie in Cambridgeshire. Another recent sighting was this casual cut dress, which she wore to a private lunch with Prince Harry and Meghan. The Duchess was wearing the best-selling black Alex McQueen jacket with a red-and-white-stripe shirt from the British brand, teamed with black trousers.
