In addition, the study contained a very heterogeneous sample of ethnicities in a multicultural country. More studies are required to examine any differences in the reliability and validity of the questionnaire across these groups. The significant association between the experience of weight discrimination and the likelihood of seeking help to lose weight is consistent with previous studies, which also showed that among this group of people, this was the most common reason for seeking help to lose weight. In the current study, we were able to explore the pattern of help-seeking behaviour further by examining the probability of respondents seeking help to lose weight in relation to the weight discrimination they reported. This study showed that the respondents were much more likely to seek help to lose weight if they did not report weight discrimination compared with those who reported weight discrimination. This is interesting because it shows that those who reported weight discrimination sought help to lose weight less. As discrimination affects people's self-esteem and self-efficacy, this is an important finding to understand and address. It would be useful to examine the factors that might

As a result of the template-based approach to drawing, you can now create custom drawings for your projects, quickly and easily. You can save the template (a.acad template) as a.cmd file and import it whenever you need to create a new drawing. (video: 1:50 min.) To import feedback into AutoCAD, you can use the Markup Assist feature. Press Ctrl+A to select the tool, and then press Enter to import the feedback from a document into the current drawing.
