Technical information AutoCAD is the name given to a software program for the design and documentation of two-dimensional (2D) drawing objects and other two-dimensional (2D) products, commonly in the form of a two-dimensional wire-frame drawing of a three-dimensional object. The application also features a 2D vector-based drawing program called DWG (Drawing) format. AutoCAD's original release was distributed for use on MS-DOS PCs running Microsoft Windows and its successor Windows NT operating systems. For other platforms, AutoCAD can be obtained and used under a variety of Windows operating systems (including the all-in-one Windows XP/7/8/8.1/10 Professional, as well as the later editions of Windows 7 and Windows 8). AutoCAD can also be used under Linux and macOS. Because of the capabilities of the AutoCAD program, the symbol glyphs

used to construct objects, lines, and arcs on a drawing, as well as the layout and presentation of the drawing, are displayed and named according to technical standards including As-Is, For-Construction and Construction-Only, IFC, UNIX, and ISO standards. AutoCAD draws models using scalable resolution, scalable lineweights, support for curved lines (regions and splines), arcs, and fills. AutoCAD supports two coordinate systems (global, object). With the release of AutoCAD 2007, the software gained the ability to document in the native AutoCAD.dwg and.dxf formats. AutoCAD can be used in conjunction with numerous technologies such as GIS, CAD-CAM, BIM, ERP, SCADA and environmental systems, many of which can be used on the same project. Windows and Linux users can easily access and share drawings through a Web-based drawing manager, which can be integrated with other Web-based tools. Additionally, users can access AutoCAD via Internet or peer-to-peer over a network using the Web-based drawing manager. As of 2017, AutoCAD and its supporting softwares, including MicroStation and Inventor, are a part of Autodesk, a San Rafael, California-based multinational software and services company that specializes in the creation, management and marketing of 3D design and engineering software. In 2014, Adobe Systems acquired the Omnigraffle information design and annotation software to work together with Creative Suite ca3bfb1094

Q: ExternalInterface.call('function', param) doesn't seem to work? I have a small problem here. I am attempting to write a flash based URL shortener. I was initially using an image which when clicked would call a javascript method which would generate a unique 8 character short code for the user. It worked fine, but for some reason the Javascript had stopped working, which is why I changed the image to be a link which would call an external.asp file. I placed the following code in my.asp page: function hcreatecode(id) { document.myform.hcode.value = id; } When a link is clicked I use the following code in my html to call the asp file: Create Shortcode The function in the asp file outputs a unique 8 character shortcode. This code is being displayed in the browser window in the URL box and the alert pop up is working. alert("you clicked the link"); However when I click the link nothing happens, I haven't seen any errors in the console. I have tried looking in to it using firebug and it appears the above code is being successfully executed. A: You're using hcreatecode(1) which is trying to find a form element with the name myform. If there isn't one, you're going to get a JavaScript error. Instead, use Hcreatecode(id) as it's more robust. Q: Dynamic number of div elements I have 5 div elements with
