Easily hide tools you don't need, and can quickly re-enable tools that were previously hidden. (video: 1:13 min.) More User Interface Improvements Intuitive and familiar tools for working with 2D Drafting: Intuitive New Design Features: Connectors: Use connectors to draw continuous lines between two or more points. Connectors provide additional dimensional accuracy and greater design flexibility. New Connectors: Radial - Radial connectors are used to connect two or more points of equal radius to each other. Bent - Bent connectors help you create a two-dimensional line, or a bend, that can be used to create a 3D shape such as a box. Concave - Concave connectors are used to create a surface. You can create complex shapes from a simple edge, such as the convex surface of a box or the concave curved surface of a hat. Draw a path using a new approach: Draw a path with a single click or drag. Move through a path with two simple moves. Draw a path with a keystroke.

Move through a path with a single shortcut keystroke. Extend a path by drawing a segment or subpath. Use the same interface to easily draw a path: Draw a straight path or a curve by selecting the path tool from the Paths & Polygons toolbar. Use either a point, a circular segment, or a custom segment or subpath. Draw a shape using the shape tools: Use a curved shape or a freeform line to create straight lines or complex curves, such as the shape of a hat or a shell. Use a path to connect two or more shapes. Use the Line or Polyline tools to draw a line between two points, or connect a line with a closed loop. You can also use a path to connect a shape to itself or another shape. Use the Polyline tools to create a closed loop. Add measurement lines to existing shapes: Measure a shape or path and add the measurement line to the shape. Use a single keystroke to create a line from a measurement tool. Specify and add a text label or dimension to an
