Q: What does the expression " Δ " or Δ or Δ mean? Does the expression Δ or Δ or Δ mean? The places are for Δ in nucleic acids. What is it exactly? A: The notation is basically for the non-standard notation for a number of symbols. It's common in molecular biology for important nucleic acid sequences to have a number of names, and sometimes these names coincide. For example, a molecule is called a "DNA" in most contexts, but it is also called a "deoxyribonucleic acid" in certain specific contexts. The way you write it, it is equivalent to the number of DNA/RNA bases. For example, 5Δ is equivalent to 5 deoxynucleic acid and means the number of deoxyribose sugars. If you care about the "chemical basis", then if you use a notation like Δ , but instead of the chemical notation, the number of bases, it is probably equivalent to the notation $3^{\text{dThd}} \cdot 4^{\text{dCyt}} \cdot 5^{\text{dGyd}} \cdot 6^{\text{dAde}}$. This notation means that if you have the bases in a DNA molecule, then you can write it in a 3D structure like this: 1 2 3 - - - 4 5 6 d c g a u d But you are not supposed to read it that way. `module.exports = { output: 'docs/articles.md', watch: true, livereload`
