Pyrolysis is one of the effective processes to recover vanadium from titanium-rich slags. It is still difficult to separate titanium (Ti) from vanadium (V) because of their similar properties of solubility and redox. This study proposed an immobilized sol-gel approach to synthesize Ti-Srx (Sr x = 1.0, Si x = 0.5 and 1.0) composite with high Ti concentration. Ti-Sr1.0Si0.5 could be synthesized at room temperature. The Ti-Sr1.0Si0.5 powder was identified by energy dispersive spectroscopy (EDS) and powder X-ray diffraction (XRD). Surface area

### HTML Guardian Crack+ With Product Key

Add protection for your websites by encoding HTML with a unique encryption algorithm. This software adds a secret protection mechanism to your HTML and JavaScript code that acts as a secret key for your website. Only you know the secret key, while the end user and the web server will see just a simple web page. Encode your websites in an HTML document, JS or CSS file, any text file, or an entire folder and protect the added security. A secret key is added and hidden inside the encoded data. You can also apply a bunch of filtering parameters such as size, timestamp and filenames. Encoding runs in batch mode, so you can protect multiple files at once and add more filtering parameters. Additional features:-Encodes all HTML files in one operation (no encoding via multiple HTML files). -Supports all major HTML document formats. -Supports multiple encoding modes (including embedding secret key). -Protects the whole website or only some directories. -Supports multiple file formats (HTML, JS, VBS, CSS, ASP, INC, SH, PHP). -Encrypts the images. -Easy to use: supports many coding languages. -Makes sure that all files are encrypted. -Encryption is strong: strong cryptography for data security. -Supports multiple languages. -Supports deep encoding filters, like size, date and word. -Removes useless files from the code. -Supports passwords, comma-separated values and XOR encoding (for Windows users). -Supports filters, including date, word, size, filenames, image,.txt,.htm,.html,.asp,.inc,.sh,.php. -Supports files from all supported file formats, including images, PDF, JPEG, and JPG. -Supports filenames to be encrypted. -Supports hotkeys for a good navigation. -Supports an image protection mode, so images are only sent to the browser when needed. -Supports an advanced key management. -Supports a list of files to be encrypted (and periodically encrypted). -Supports a backup and a restore option, so you can keep using the program if you lose the configuration files. -Supports an image optimization option. -Supports a multiple profiles and custom files list for uploading files. -Supports Unicode encoding for better reading. - b7e8fd5c8

HTML Guardian is a lightweight Windows application that features encryption capabilities for helping you encode your HTML pages, so other users cannot steal and reuse your source code in other websites. This tool comes in handy for webmasters who need to encrypt their HTML code and JavaScripts, password-protect their websites or individual files, optimize and compress the source code, as well as protect entire folders, websites, or user-defined file lists in a batch mode with security settings for each item. Rich-featured layout The program offers support for many dedicated parameters, so you need to take some time and experiment with each built-in function for making the most out of this utility. Encryption options and filters HTML Guardian gives you the possibility to select the files and folders that you want to encrypt and apply a wide range of filters, such as filename pattern, size, date, and/or user-defined words. Plus, you are allowed to create multiple filter sets and apply the desired one in your future projects. It works with the following file formats: HTML, JS, VBS, CSS, ASP, INC, SH, and PHP. What's more, it offers support for an image protection mode, and you are allowed to protect pictures bigger than a custom size and disable the browser image cache. What's more, you can test the encrypted data, define a list with files that you need to periodically encrypt for triggering the automation of common encryption tasks, encode entire websites, and protect your files with the aid of a strong algorithm corresponding to a 384 bit key. Last but not least, you can use hotkeys for a better control over the entire process, write command-line parameters, back up all your current settings and restore them, install additional plugins for enhancing the program's functionality, as well as convert web files (e.g. HTML, JS, VBS, TXT, PHP) using the UTF-8 encoding method. Additional security features HTML Guardian comes packed with several powerful tools built to give you a hand when it comes to disable right-click mouse operations, printing, clipboard and Print Screen options, optimize the encrypted source code, encrypt only some parts of the code, clean up your files by removing useless items (spaces, tabs, new lines, comments) from the encryption process, as well as save different sets of protection options to multiple profiles. An overall powerful encryption app All in all
