Video Splitter can also take advantage of your system resources and work smoothly, as well as quickly process your tasks. For example, the application can edit, merge, split and convert several video formats in 1 or 2 clicks. And it can also set up different settings for the audio and video codecs, size and the frame rate of each part or slice of a video. It requires little effort to use and offers many assistance tools such as a manual and a brief help file with screenshots. The app also supports drag and drop from the OS file system for easy importing of videos. Importing files from the file system is only possible in one of the supported formats. In other words, you can drag and drop only .AVI, .WMV, .RM and .VOB files onto the program interface. For a quick preview of your video, you can click the "Play" button, select to play a specific time interval or go through every frame of the clip. And you can also use a clean interface to trim video and set the start and end time, trim a time frame, or clip frames of video to a specific length. Plus, you can choose the codec, size, frame rate, bit rate and quality of each part, merge several video files into one, and export videos to the AVI, MPG, WMV, VOB and RM format. You can also take a snapshot of the desired processing by pressing the "Settings" button. And you can look into a brief help file with screenshots for more assistance. The video processing software requires a good amount of computer resources. It is fine and has a decent response time. The program also quickly finishes a task and the results are very good after conversion. IBN Video Splitter manages to keep a good image and sound quality after conversion. However, IBN Video Splitter fails a couple of tasks during our tests. The progress bar sometimes appears to be not responsive and we also experienced several errors such as "Could not open the file for writing". However, it is easy to solve these problems by clicking the "Help" button. b7e8fdf5c8

IBN Video Splitter is a multimedia software designed to trim video clips. It supports multiple formats, including AVI, WMV, VOB and RM. The interface of the application is plain and pretty intuitive. Video clips can be imported into the list by using the file browser only, because the "drag and drop" method is not supported. So, you can preview clips and trim them by marking the start and end point. But you can also split the selected range into equal-sized parts or limit each one to a particular value. Furthermore, the output video can be converted to the AVI, MPG or WMV format and you can configure audio and video settings regarding the size, frame rate, bit rate, aspect ratio and quality. The video processing software takes up a moderate amount of system resources, has a good response time, quickly finishes a task and manages to keep a good image and sound quality after conversion. Plus, you can look into a brief help file with snapshots for beginners. On the other hand, the interface is outdated and you cannot modify program options (e.g. enable IBN Video Splitter to minimize to the system tray) or trim multiple parts from the same clip at once. Moreover, IBN Video Splitter failed a couple of tasks during our tests (several errors popped up). We recommend this program with reservations.

Now we can confirm that the program indeed contains no adware or malware, but our disappointment comes with some other things. IBN Video Splitter is a serious video processing and splitting tool, which is perfect for those who like to use different software for different functions. However, we believe that such versatile software should be a little more stable, friendly and intuitive. First of all, you cannot resize the program interface, and the toolbox and list only offer limited options. The picture is too small on my screen. Moreover, all video files imported into the program automatically get processed and converted, so there is no real need for a config file. But then this program would lose its value, so the best thing you can do is to buy a copy of this program yourself and try it out.
