
Solmec: Hollow Planet Trainer

You are the only one in the world who can be deep underground. The world is in danger, enemies are watching you. Your mission is to collect the gems as far as possible before they completely destroy everything around you. How deep in the caves can you get? Can you survive on this dangerous journey through the underworld? What's inside CAVE EXPLORER? Gem hunting on an epic level is what you can expect in this adventure. Tired of the same boring old underground locations? Instead of just looking for treasure and items, you will be venturing deep underground into ancient Roman cave galleries. Game Features: - Find your way through ancient Roman galleries - Find your way through 15 enormous caves with 5 different levels - Protect yourself from danger - Use powerful treasures to prove your combat strength - Discover the secret of your amulet For those who want to try out this APP, and if you would want to leave some comments or suggestions, please do not hesitate to contact us. Write a review My review Review from Reviews I played the game on my tablet and was amazed at how good the graphics were. Very dark cave and some very interesting choices on what I had to do. In the end, I was very happy with it. Much better than the entire boring dull world I played cave dweller in the 80's. Great game. Game took me about an hour to finish. New Game Everyone plays this game and I wouldn't be surprised if it becomes as popular as cave dweller and fantasy land. DAMN! :P... I really should have bought this when it was on sale instead of downloading the whole game... :(If you want to get the full game, here's the link:

Try Direct Crack Carcinoembryonic antigen from human colorectal cancer: evaluation of immunological detection methods. The carcinoembryonic antigen (CEA) is a glycoprotein released from cancerous cells and widely used as a tumor marker for the follow-up of most carcinomas. In this study we measured serum CEA levels in patients with colorectal cancer (17) and benign diseases (22) using four different immunological methods: the quantitative radioimmunoassay (RIA), the enzyme immunoassay (EIA), the double antibody enzyme-linked immunosorbent assay (DELFI A), and a dot-immunobinding assay using CEA-specific monoclonal antibody. The serum CEA was elevated in 19 (70%) patients with proven colorectal cancer. The accuracy levels of the methods were RIA, 75%; EIA, 81%; DELFI A, 90%; and dot assay, 100%. I'll be on the final day of the run...! I look forward to returning to London for an evening of gunning, grinding and deb
