How to add a Raspberry Pi as a Command Station By- Kevin Crider (CC BY-SA 4.0) Being a Humble Pi user during the last few months, I've been in search of some tools to help make Humble Pi's objectives more tangible - as the platform isn't exactly like Ubuntu and other popular distros, there has been some confusion on the part of unsuspecting users on how exactly to get Humble Pi installed. Particularly, I wanted users to see how the cases and slideshows actually look, since the screenshots on the Wiki page don't give a good idea of how the cases and slideshows actually look. Initially I couldn't find a camera app, so I wrote some software to capture a few snaps and stitch them into one. I thought this was pretty cool, and I was pretty proud of it. But then I read the bottom of the README. Humble Pi has recently discontinued its App Store, and that was starting to feel a bit odd, especially for a project I was planning on using to sell on the App Store. Then, a couple of weeks ago, I opened the official Humble Pi Store, and saw their most recent release: a Raspberry Pi installation kit. Humble Pi had long since discarded its App Store, and rather than being on an entirely web-based platform, it has decided to go after a slightly more traditional model of selling things. This means there is no longer any reason for the software's author, myself, to do anything. Rather, it's something that Jason

"jare" is supposed to be working on and maintaining on GitHub. It was strange, though, that Humble Pi would've done all the work to package and distribute their Raspberry Pi in a kit, and never updated the software authoring website. It made me wonder, what other software is missing from the Author website but has been packaged and distributed by Humble Pi? Thus began my quest to find software for the Raspberry Pi that are missing the Author website, but have been packaged in a kit! What I'm Looking For Humble Pi has several licenses which users have to pay for to actually download and install Humble Pi. I do not want to force users to pay for software that they can get for free. Thus, I am specifically looking for software packaged in a kit, and that aren't on the Author site, although I will accept software that
