(We're just being fair here.)\_ ## DRAW If you're looking to make artistic images or designs, then you definitely need a good drawing program. Not only will it help you to figure out how to tell the difference between colored lines and lines that are really just a zigzag splatter of black lines, but it also will help you translate your ideas into concrete images. Some drawing programs are meant for, and meant to be used by, artists, but some are much more useful and versatile. Table 4-2 reviews a sampling of the most common commercially available drawing programs. ## EMAIL Email has been one of the most important ways to communicate information and share media for the last 25 years. This is because, unlike pagers and cell phones, it isn't a pain to use. Unfortunately, some individuals are still "taken in" by scammers who send out massive volumes of mail and by Microsoft and Apple's iCloud clients who are sending out huge amounts of e-mail. If you want to get into the computers of multiple people, sending unsolicited mail from someone else's address isn't a great idea. If you use the wrong Internet service provider (ISP) and get caught, you could be prosecuted and even go to jail. If you don't ask permission, you could be sued for copyright infringement. In addition to scammers and spammers, organizations need to be cautious in what they do with all of the information you put into the computer. However, many people view e-mail as private and prefer to send information that others couldn't see.

The present disclosure relates to an image forming apparatus having the following function. Some image forming apparatuses having a function of storing image data transmitted from an external device, such as a personal computer (PC), in an image memory, that is, a hard disk drive (HDD), have been developed. Such an image forming apparatus may simultaneously receive a large number of image data transmitted from a plurality of devices via, for example, a network, and may store the large number of image data in an image memory. A technique has been proposed in which an image forming apparatus registers a device from which image data is to be transmitted in association with image data to be stored in the image memory (see JP-A-2011-251131, JP-A-2009-314673, and JP-A-2008-177081).Q: How to initialize a 2D dynamic array in C?
