This update has made available a number of patches for the.Q: How to scrape pages of a site that have a loop in their HTML We're building an app that logs flight statuses of airlines. The airline has a website where it post flight info, and there is a daily or weekly loop that posts the same flights, every day or week. So it's a single page, but there is a loop of the same flights that are posted. Here is the code I'm trying to scrape. I'm trying to get all the flight ids for the looping flights. url_parser = urllib2.urlparse def parse_flight_data(flight_id):

flight_url = "" # Correct URL, but not all the flight statuses are posted flight_status_url = (url_parser(flight_url)['path']) flight_status_page = urllib2.urlopen(flight_status_url) Flight_ID_list =[] # some code to loop through all the pages that are returned from the urlopen #page until the loop is complete, so we can extract all flight ids from the loop
