The levels of circulating immune complexes (CIC) in peripheral blood were studied in a group of 29 children with bronchial asthma (BA) of different severity. The children were treated according to two different regimens of treatment: in regimen 1 they took preventive treatment only, and in regimen 2 they were additionally given immunostimulating treatment. A significant increase in CIC was found in severe cases treated with regimen 2. It is suggested that the increased concentrations of CIC may be a manifestation of the activity of the inflammatory process in the lower respiratory tract. The data obtained suggest that immunostimulating treatment of patients with severe BA may improve the clinical picture.Discovery of novel antiviral agents: discovery of 2-amino-2,2-difluoropropanoic acid. In the course of our screening for new antiviral agents, we found that 3-(2-amino-2,2-difluoropropanoic acid) showed an activity against Herpes simplex virus (HSV) type 2. We isolated the chemical structure of the active component and synthesized analogues having various functional groups at the 2-position of the 2,2-difluoropropanoic acid moiety. These compounds were tested for antiviral activity and cytotoxicity. Some of them had more potent activity than acyclovir against HSV-2. The 2-amino-2,2-difluoroethyl analogue was the most active compound, and showed selective activity against HSV-2

AutoCAD Free 2022 [New]

XRef XRef is a common file type used to refer to other drawings. A drawing has a cross-reference table which contains the cross-reference information that the application uses to identify other drawings and to insert other drawings as layers. A drawing may have multiple XRef tables, one for each level of cross-reference, if required. AutoCAD makes heavy use of cross-reference tables. For example, if a user draws a letter "A" with the A-Box tool, then draws a rectangle within the letter, that rectangle is automatically placed at the correct location. If the user now needs to draw another letter, AutoCAD will simply draw a reference to the first letter, as if the user had drawn it. XRef information Each XRef table contains the following information for each drawing referenced: Drawing reference number: The AutoCAD reference number that identifies the referenced drawing. Drawing type: Indicates whether the referenced drawing is a model, part, assembly, block, or other type. Drawing name: The name of the referenced drawing, such as "CAD Model". Drawing type: Indicates whether the referenced drawing is a model, part, assembly, block, or other type. Drawing number: A unique numeric identifier for the referenced drawing. Description: Provides some descriptive information about the drawing, if desired. Name: The name of the referencing drawing. Reference description: A brief description of what the drawing is being referenced for. Other cross-reference data Many other types of cross-reference data are available. Examples are the name of the referenced drawing, the drawing type, the drawing's description and user name, the cross-reference level, and the assigned cross-reference type. What's New In AutoCAD?

Import/Export Entities: Keep entities separate from a drawing or a file, but use them together. The entities can be printed, saved, shared, or sent to others. Drafting for Plants: Draft plant diagrams and designs with more flexibility. Include color, shadows, reflections, and freeform 3D plant models. Layer Management: Assign layers to objects, keep track of the layers, and manage your layers in the Ribbon. (video: 1:07 min.) Document Editing and Formatting: Edit all your drawings at once, with a single command. Edit text, line styles, layers, and dimensions, add comments, and more. Customizing AutoCAD: The appearance of AutoCAD can be customized to your drawing and working environment, whether you're using Windows, a Mac, or a device that runs Android or iOS. Tools and Features for 3D Design: View and edit 3D models, quickly and accurately. Model your part or part library and design your part or parts from 3D. Use existing models from Autodesk 360, the cloud. Image Retouching: Faster image retouching with 3D retouching and instant visual feedback. Cut, copy, and paste images and edit the resulting images with full control. DXF import and export: Import and export AutoCAD DXF file types, such as DWG, DXF, and DGN files. These file types are commonly used for 3D modeling. Themes and Themes Manager: Customize the appearance of the Ribbon and toolbars. Themes will be available for Windows, Mac, and mobile devices. Themes Manager lets you manage the appearance of your computer as well. Enhanced Pen features: Use multiple pens to easily add more strokes. Undo, modify, and reverse pen strokes. Undo can be limited to a specific shape or object. Fine-tune the pen properties: Adjust the pen's size, color, and shape in a single click. Use custom pen handles and pens to create new pen sizes and styles. Fine-tune the pen to create drawings that express your creativity. Draw or paint with in-line style on the fly: Draw on top of the screen while you work on the document. You can also draw on multiple
