u will need to go to winpe and then to vista recovery. in vista recovery use the option to "reboot computer" and then use the following recovery options to repair your copy of vista. update: enable or disable this fix option, it's only useful for windows xp professional and professional x64. fix the boot record: either the first or the last boot record. if u know which one u have to choose "

<http://10.73.65.84/vdp/> " Not only can the MSI use multiple monitors to give you a gaming experience that is unlike anything that you have seen before, but you can also use it to become a much more efficient workstation by splitting it into two separate, independent displays. Want to know more? Read about the MSI Multigpu Kit for AMD CrossFireX or our recent Multigpu Windows 7 MSI review "

dear lovejeet, can you tell me if there is any official link to buy the product key online in india. microsoft store in india shows only windows 8. I used the above links to download and try win7 on my netbook. Its been great on my netbook. i want to purchase it right now ive 15 days left for trial version o end. Can you let me know from where i can buy a key mail id: [emailprotected] I have a problem. I have the ISO for Windows 7 x64 and Windows 8.1 Pro x64. I can't use the ISO and burn it onto a blank CD because i don't have a burner and i can't boot up from it. If you can help me out, I would greatly appreciate it. Please help!! Hello i have here windows 7 dvd x64 from my spare computer i have a problem im not able to boot onto my dvd just boots straight into windows 7 i tried diffrent dvd's to see if the problem was in the disk but it stills have the same problem -> my DVD is updated with the latest drivers for my nvidia 210 gfx card im using a windows 7 x64

## **(2011) Windows 7 X64 Dvd X16 96072 Iso**

Part 3: After replacing the microsoft directory with my own, the program hangs at the main screen, I can't even find where it's stored..The next thing i did was try the original iso downloaded from <http://www.microsoft.com/en-us/download/details.aspx?id=69179>.But the problem here is that the setup is not working, every time i get to the setup part(after i run the setup.exe) i have no problem and I can setup the windows 10 and the installation is fine.After installation I reboot my computer to use the windows 10 and it just let me choose windows 7 as the default OS rather than windows 10, I have to load the page <http://www.microsoft.com/en-us/windows/update/> and click the check for updates which is fine. For some reason, I could not access my laptop's BIOS. My Windows 7 was already setup on another hard drive. I restored my backup after repairing my laptop to Windows. I chose NOT to repair because I did not have any important data on that computer. I thought that Windows 7 Pro could be used on my hard drive at that time. I have now had it almost 2 weeks. It is so slow. I even tried to install Windows 7. It is in a blue screen. So I could not install anything. Windows 7 desktop edition was selected. I did not choose between Home and Pro edition. I never had the home edition. I'm currently running Windows 7 Ultimate and I want to upgrade to Windows 7 Pro. I do not want to use my Windows 7 installation CD, instead, I prefer to use an ISO file. I do not have a copy of Windows 7 Enterprise or Ultimate, but I do have a friend that does, who has Windows 7 Ultimate. I asked him if I can use his copy and he said it is okay because he just uses it for digital movies and downloads. However, I still have a question. Is Windows 7 Pro (or Enterprise) ISO file different than Windows 7 Home Edition ISO file? 5ec8ef588b
