For a font designer, Adrian Frutiger was exceptional. The font designer adopts a very simplified approach in its design. He starts from the idea of constructing a typeface that's recognizable from far away, easy to read and visually clear. He aims to accomplish these requirements with the most simple and elegant possible solution. Next, I opened the tutorial. It shows the first letter of the alphabet in multiple sizes and with multiple weights. After a few minutes of following its path, I discovered that it has a similar looking to the Garamond and Caslon - the only difference was the font. The curves and diagonals of the letter were very much alike Garamond and Caslon. So, it was called Frutiger. For this reason, I suggested it as a possible name for the typeface. Adrian also liked it. As I just stated, the font is very clean and classic. There is no word or word combinations which are too confusing and ambiguous. So, don't go for any word document with your fonts if you want to use the fonts for your projects. You may have some problems with your web browser as well as the typeface file itself. Word processor provides the error message that says, "The font file isn't a font." Then open your PDF viewer and you can know the exact error.
