Captures single stills or animated sequences. This application is designed to capture stills and capture animations. In fact, it is the ideal tool for creating comic strips or other animated media. To do this, you must have: 1 A powerful computer with at least 2.4 GHz processor 2 A USB port on which to connect the camera 3 The QuickTime Player with which to display and edit video With the image you want to add, just press the capture button to start the capture process. To capture the sequence of images, you must first open the QuickTime Player and play the video. Then, you can save it as a Movie. To convert a sequence of photos into a movie, it is necessary to create a Movie Project. The Movie Project is the basis for saving your movie. You can create a Movie Project from a series of stills or from an animation. To create a Movie Project from a series of stills: 1 Open the Movie Project 2 Click on the movie symbol in the bottom-left corner 3 Press the project button in the top-right corner 4 Select a series of stills from your memory card You can then modify the settings of the stills, such as exposure mode, shutter speed, aperture, ISO and ev compensation. To create a Movie Project from an animation: 1 Open the Movie Project 2 Click on the movie symbol in the bottom-left corner 3 Press the project button in the top-right corner 4 Select an animation The settings for the animation can be modified by pressing the buttons on the left side of the application. You can configure the size of the frames, the number of frames per second and the duration of the sequence. Once the settings have been applied, the project is ready to be saved. If you are in a hurry, you can also double-click on the movie symbol. If you double-click on an animation, it will create a still image from that animation. However, the settings are not configured. To change the settings of the still images, you will have to change the settings for the animation. In order to have access to all the settings and options available, you can go to the 'Configurations' menu. Now, to access all the available options, we are going to have a look at the Help. 2.2.1 Configurations To configure the project, press the project button to open the '2edc1e01e8
