Although you cannot appeal to a help manual, you can easily get an idea about how the program works because the setup options look easy to decode. Configuration settings LP-Screenshot gives you the possibility to make use of preset hotkeys in order to trigger the screen capture mode. You are allowed to press the 'PrtScn' button in order to capture a screenshot of the entire screen, and employ the 'PrtScn' and 'Alt' key combination for taking a screenshot of the active window. What's more, you can launch the application at Windows startup, select the folder where the screenshots are stored, open the saving directory directly from the main window, set the output file format (JPEG or BMP), and automatically open the screenshots after saving them to the disk. Tests have pointed out that LP-Screenshot carries out a task quickly and without errors. It delivers very good output results. It is friendly with system resources so you can keep it running in the background without worrying that it burdens the overall performance of the computer. Bottom line To sum things up, LP-Screenshot has to offer nothing more than a simplistic software solution for helping you take screenshots, and is suitable especially for less experienced users.
