What's New In?

Win32/Alman Remover is a simple security utility designed to scan your computer and remove the Win32/Alman virus. Especially designed to tackle this issue and deal with a single infection, Win32/Alman Remover must not be considered a security software product per se, as it doesn't provide real-time protection and can't find any other kind of malicious file. Once you run the application, it automatically starts a system scan,

checking the entire system for the virus. The scanning process takes just a few minutes, with a moderate amount of hardware resources needed to complete the task. While the interface is pretty minimal, the main window also displays a bunch of useful details. Beside the fact that it shows the area and the object being scanned at any given moment, the bottom of the window is being used for statistics. You can thus see the number of scanned objects, the cleaned and the infected ones, but also the ones that have already been cleaned or deleted. There are only a few options available, including the possibility to select or highlight clean or infected files, but also the ones that cannot be cleaned by the application. They can all be copied, renamed or delete with just a click. Win32/Alman Remover works pretty smooth and although it stresses up the CPU and RAM a little bit, it completes the scanning task in a few minutes. All in all, Win32/Alman Remover is a great way to make sure the highly-popular Win32/Alman virus hasn't reached your computer yet. It's easy to use and serves its purpose pretty well, but you still need a full-time antivirus product to stay on

the safe side all the time. Language: English Remover AV Win32/Alman Remover is a simple security utility designed to scan your computer and remove the Win32/Alman virus. Especially designed to tackle this issue and deal with a single infection, Win32/Alman Remover must not be considered a security software product per se, as it doesn't provide real-time protection and can't find any other kind of malicious file.
