Reviews Daniel Valdez Aug 24, 2019 I recommend this tool to all Word-users "Working with a large amount of Word-documents is not something that is easy. You always have to spend a lot of time editing your files. As a result, you get tired after a certain time and the quality of the resulting documents is really low. Now you will not have to spend hours per day at your desk to prepare quality documents. Word Automation Tool helps you do this with just a few mouse clicks. Simply select the tasks and the program will do all the hard work for you. You will not have to worry about formatting, page numbers, headers and footers. Even better: all processed documents are saved in your original folder." Cherie-Marie Grant Aug 25, 2019 Best program for me "I'm a Word-user. I use it almost every day. Word Automation Tool is an application that enables you to batch process Word documents and modify their settings while maintaining the original files untouched. Comes with a minimalistic and well-structured interface The program comes with a simple and clean GUI that displays all available functions and features. While the vast majority of the interface is dedicated to viewing the documents, in the lower section you can preview the active task selected for the processing. You should know that the program generates copies of the documents it processes and does not modify the content of the original files. You can access the processed files from the folder that the application creates automatically on the desktop. While the desktop is the default location, you should keep in mind that you can change the location anytime or configure the tool to process the documents in the file's native folders. Enables you to format your documents As you probably already hinted, you can browse through and switch through the tasks by accessing the Select Command Type function from the toolbar. Therefore, the app permits you to remove certain objects from your documents, modify the page setup, split large documents into separate Word files and vice versa as well as delete the header and footer. It is important to note that the application is mainly designed to lend you a hand with the basic formatting of the documents and hence, does not include advanced editing functions. Therefore, if you need to change the content of the documents, then you can do so via Word.
