Lightroom 6 adds some new features as expected. It is a much better version compared to Lightroom 5. However, I found that sometimes it is confuse on what the number next to the number of the photo is, which what the Preferences says. The latest update of Lightroom is a great upgrade, but it is not perfect. It is very frustrating that you cannot add more number to the photos that have been loaded on your computer. This is another thing that I wish they can fix.

What I'm loving in Lightroom 6 is the ability to export icons, a feature that has been talked about for a while now. I can't wait to see how my annual newsletters will come to life when I import these extras into a template. It's a creative little tool that will make digital life a little easier in the future. I found myself needing more control over the Lens Correction and Metering options, so I did a bit of tinkering to see if I could tweak a few things. I do wish that I could make the correction blend zones invisible. I only want to show the parts that have been corrected. I also wish that the Channels and Bands options had more to them. I wish it had a way to separate the Chinese characters from all of the English ones. Also, I wish there was a way to reverse the colors and make the icons and wells more visible.

Overall, Lightroom 6 is a fantastic update that is sure to keep Apple's image management tool a huge player in the industry. It does feel like the program has some room for improvement and it also seems like a little bit more could have been done to make a smoother process when importing photos.

As you scan images, the new Clean Image feature can scan a source image in the background and use it as an initial template, which makes it easier to clean up. The Overlay option is ideal to use when the background of an image is busy, as it simplifies the process, while the Merge option is even better for images that need to be combined. Photographers can now correct a single layer, a single channel or a group of layers by applying a single adjustment. The new Smart Sharpen feature is useful for working on detail-rich images. Using advanced machine learning, it can detect surfaces in an image and adjust them to prevent a loss in detail. The new Advanced Blur option in Photoshop Distortions makes it easy to blur an image. Gone are the fears of misshapen edges and lost detail, thanks to the Advanced Blur workflow. Advanced Blur can automatically select a suitable radius and let you adjust the contrast, shapes, and textures within an area. The default option for the Filters > Adjustment layer is to merge all the layers together. This simply means that all the adjustments (luminosity, tone and contrast adjustments, which will darken the image or brighten it) are applied to every layer and merged together, so you have the best chance of improving the whole image. When you preview the image in its new version, you should see all the adjustments are applied to the entire image. The new Painter's Touch feature will help painters edit images by understanding their style and letting them use brush strokes more easily. To test Painter's Touch, simply open an image in Photoshop, and use the right and left arrow keys to apply brush strokes to a single image; use the Tab and Shift Tab keys to apply paint strokes to a group of layers; go to the Selection tool and use 'Paintbrush' as the first selection option to add paint stroke to the edges of your selection; or use the Pen tool and select 'Stamp' as the first selection type. A tool some people may not be aware of is the Retro White Balance tool. If you want to make a white-balanced image, and you don't like the way the image looks, you should know that you can do this manually, with the camera's White Balance tool, and you can also do it using the Retro White Balance tool. What's great about it is that it's more easier once you understand it. All you have to do is set the White Balance to 509, open a new document, choose Edit > White Balance > Retro (once you click on the tool, it will be placed into the menus). The image will automatically adjust. The AdobeRGB color space expands the color gamut of your monitor, delivering up to 1.07 million more colors than sRGB.
