When you do that, you're creating an alternative version of reality. You can set specific colors or values for the pixels you create or move, like a t-shirt maker might. You can also work with the pixels individually or use the bucket tool in object mode to clone and manipulate multiple colors in a group. Once you are familiar with the workflow of navigating through workspaces, you want to make sure you are aligned with the presets that are in the native tools. So make sure you understand the keyboard shortcuts here. And then you can make a note down to yourself if you find it convenient or not to use those presets to guide you through workflow. Photoshop for macOS has many different preset modes. You want to make sure that you know and recognize all the icons. Here is a link to an article on the tools in more detail. e3d0a04c9c
