As I mentioned, a considerable amount of new features have been added to Adobe Photoshop CC 2018, including the inclusion of the Unified Lens Blur tool, the Normalize tab to reduce noise, and interactive brush tools. To access the new features, just go to the Edit Menu, then the Options menu, and select Preset Manager. Here, you can find the options to access the new options. You'll find most of the new features in the latest Adobe update are categorized under "Editing". What you'll find in other categories such as Photo Browser, Image Patrol, Slideshow Maker, etc. is that they've been rebuilt to meet the new standards of the new release. That said, there are still quite a few features from previous versions that have been removed. Adobe Photoshop CC 2018 now includes the option to create multiple layers for editing of certain effects more than once. Regardless of how many times a layer is edited, Photoshop CC asks only once whether or not it is OK to make a derivative version of the Layers without erasing the original. It also recognises that you cannot make changes that involve deleting others, and will alert you before doing so. The new Adobe Photoshop CC comes with the option to simulate an HDR workflow by importing one exposure and bracketed shots that you have taken. This includes HDR bracketing captured while using Exposure Blending, Exposure Blending captured while using HDR, and more. Note, however, that the software can only import files between 2014 and 2017.

Creative Cloud - Photoshop Creative Cloud includes an all-new permissions system, native file-saving and other Mac features. The latest version also makes it easy to share your work and work with others in a way that is simple and quick. Share - Save your files in the cloud, across devices and your desktop, and have them always ready to work on. You can easily give access to images, using one password; create group libraries within your company to share work and save costs; and comment on and share with colleagues so they, too, can easily view and edit files. Shared Libraries - opened cages of your files can be copied, moved, and shared to a network. Asset libraries are a great alternative to creating shares; they can be filled with 17 different file types, even images, videos, and Word documents. The Asset Libraries option also enables you to navigate assets by type or date, which is great feature if you are selling a livecourse. Share Files - send files directly through a network, including Dropbox, Box, Google Drive, and FTP networks - in a matter of clicks. Adobe also now makes it easier to use and share via social media sites like Twitter, Facebook, LinkedIn and Reddit. 1-Click Edit, Delete - Over time, the Edit menu has become cluttered with choices. The new Photoshop CC enables you to batch-delete objects without needing to select each one beforehand;

apply fixes, or even correct perspective with the one-click “Undo Object” option alone.

Using the Web version of Photoshop, you can share your work online to your social networks, edit your photos on your desktop, or view and print your finished projects. In fact, you can use Photoshop to make a hefty sized T-shirt with your image, as well as widen your art or photography beyond the range of a 24- or 36-megapixel camera. With everything you need to unleash your creativity in Photoshop, this is the one software package you need to do it. However, there are times when you need to remove or reduce the color of an adjustment to bring out detail in an area or to make some other adjustment in an area that isn't in the adjustment. Total Control allows you to convert all the color data within the adjustment layer into its own layer, subtract it from the layer above, then convert the layer back into an adjustment. Because you can remove or reduce all color data in a layer without affecting the photo's layers, you can preview and adjust the effect of the layer without affecting the rest of the image. This gives you the power to fine-tune your layer's changes without risking a lot more. To convert the layer back into an adjustment, right-click on a layer where color has been removed and choose Convert to Adjustment Layer. Then choose a color value from the text menu, and the layer will be converted back into an adjustment. Keep in mind, however, that the original color data remains in the layer.
