While I'm possibly going to install Lightroom 5 on my iPhone, I still need quite a bit of help to go from L4 to L5.0, like how to export multiple tiff files from my camera without having to go to the folder, as well as how to change my working copy from L4.0 to L5.0. Anyways, thanks for your time. Thanks for this great guide! But I have a question about Adobe Lightroom 4, dear project manager: I have a folder with a lot of images, around 816 raw files and I have to organize them due they don't exist as thumbnails. Every raw file has a date and at the beginning it starts with 'LQ'.I have all the files in one folder but it's not easy to search them. Do you have any ideas what to do?
