By default, Lightroom 5 is now set to Open in Lightroom 5. The original images, however, can still be opened in Lightroom 4. The files are still in the Lightroom 4 format internally, they just present a new look. I'm now able to open any image in Lightroom 4 or 5 and see the Hasselblad raw files without any crop, pixel peep, or scaling issues. In the new version, Lightroom's Crop Tool is now compatible with most of the other adjustment sliders. You can crop by using the Targeted Adjustment layer in the adjustment layer panel. You can even crop while the normal editing tools are active. Viewing and editing an image from the new Forum view in Lightroom 5 is more convenient than before, thanks to the redesigned design over the entire application. Lightroom 5 now displays previews in a single row, with three images on top of one another. To see a larger preview, you use the Show Details button. It brings up the monochrome view while, at the same time, showing more detail at the bottom. The zoom controls are now located on top. Barring this, I'm very happy to see Favorites and other image collections have been revamped, too. New capabilities have also been added for the Lens Blur tool. With Lightroom 5's new Lens Blur tool you can not only simulate the affect of diffused light and medium-filtered lens fog, you can also simulate the result of changing the distance of the subject from the lens. There is a small preview window showing the difference that can be adjusted as you apply adjustment layers, or you can adjust the radius of the circular blur area.

Step 1 Select the best quality photo of a sunny day. In order to get the best results, select a photo that has good contrast. Select the background and then Feather the edges of the photo so that only the details that you care about will be in focus. **Step 3** Add a new layer in as your canvas. Add a white background and then set the blending mode of this new layer to Color Dodge (the Control panel, Layers Panel, see page 104). **Step 4** Select the Gradient tool (G with a black arrow) and click on the background layer. Drag from the top left to the bottom right on this layer. Increase the Saturation value (Image menu, Adjust tab, Saturation). Make sure that you have not set the Saturation to more than 100%. If you have, then decrease the Saturation. **Step 5** Invert the colors of the pen tool. Press the N key to Toggle on Nearest Neighbor. Select the black color and then with the Magic Wand Tool (located in the toolbar) select only the letters of the background. Press CTRL-A to select them all. This will be the stencil that you will use to create the fractals in the background. Some websites or even email campaigns will throw in Google Image Search results throughout a page, blog post, or work. These variations with quality and color can make it impossible for the original designer to use the correct color palette in a publication or piece. Luckily, you can use a non-destructive method to get around this issue. e3d0a04c9c
