There have been some interface changes. You can horizontally scroll layers within a group (instead of only being able to see them in the order you add them), as well as within the canvas. By default, Photoshop will select the active layer as it opens, though you can change that to match your work flow. You can now create an empty canvas and trash that by holding the Option key (Option key on Mac, Alt on Windows), and you can work in just the files you need without a ghost of the empty space. By default the most recent files are always open, which means Photoshop will automatically jump to the most recent version of the image when you open it, without asking you. For those who have a lot of old files, you can change this behavior by going to the file menu, selecting Preferences, and deselecting "Show Previous and Next Files." Auditing a selection op (video): You can tell if the selection works just by looking at the selection outline without actually running the tool. The reality, supported by extensive research and experience, is that DoF (Depth of Field) and other types of camera imaging attributes have become the bulk of the content of most users' RAW files. This fact has some implications. While Photoshop is one of the best available tools for creating images and altering them, it is rarely used and utilized one of the following ways: 1) For widening the tonal range. 2) For manipulating new image-based tools or 3) Fiddling with the image details via sharpening, channel adjustments, noise reduction or spot reduction. Often, secondary imaging attributes are used for any of the following purposes: 1) Creating WOW effects. 2) Creating depth of field effects to blur other images or other attributes. 3) Creating a look, like film, where you may or may not have a preset look. 4) Creating filters that change basic brand, copyright and/or program branding. 5) Fiddling with various color conversions. 6) Manipulating the white balance to the detriment of other attributes of the image or 7) Making alterations to the image data. 8) Creating an artistic look to embellish images.
