With the addition of the new Memory Layers feature, users now have the ability to perform cloning effects and changes on other assets in their image. The new Clone Layers tool allows users to clone and combine layers within the same canvas. A new Merge Layers feature allows users to combine layers into a single layer with previous state preserved. In addition, the new release features a new intelligent cropping tool that can automatically segment the picture into different and more useful parts. There are an abundance of new modern style effects and an even more impressive number of adjustments meant to help you perform more photo-correcting edits. The new Map panel is a much welcomed function that enables you to display the mask, reduce the size of the layer, or merge that layer with other layers for more editing options. Finally, the newest update includes a variety of new features and upgrades, which include a completely new way to create layers, layer styles, and even create a painting brush. There is more image retouching help, as well as an improved desaturation tool.
