Adobe Photoshop is a well-known software application that allows for picture editing of any complexity. It's one of the most popular and widely used image editing applications. My main criticism is Lightroom. I would love to see it function more like Photoshop when it comes to RAW processing. Adobe did something right when it came to the high-difficulty file types like ARGB files and those with ICC profiles. The conversion of these files from one type to another is easy and quick. However, when it comes to normal jpegs, Lightroom feels a bit painful. I understand the issue with the Sony sensors, but it is annoying to have to activate the “optimize previews” checkbox every time I import a new file. Overall, Lightroom is a perfect companion to Photoshop, and my favorite tool for RAW editing. I still think there is a long way to go before Lightroom borders on flawless performance, but it is getting a bit closer to a perfect tool. Hands down, the best thing about Photoshop for iPad is the ability to work in the dark (WYSIWYG) as you are thinking out loud. There are very few limitations and you can map out your next edits in real time on the page. The app has tremendous potential for artistic discovery, which is exactly what was the reason I got into this space in the first place. “Photoshop for iPad will make anybody an artist overnight,” I used to say, and that remains the case. In a move reminiscent of Apple’s Continuity technology, Adobe has added support for gestures and gestures. This makes it much easier than before to flip back and forth between layers or insert new content with a single swipe. In addition to the Prepress features I wrote about previously, Photoshop for iPad Pro now provides full integration with Style, Channels and Smart Filters. And the search features in the Layers panel now include Content Aware (CTB) techniques to make finding layers and content faster and easier than ever before.

The first thing that struck me about Photoshop is that it is a very big application. It comes with a whopping 2.2GB of files and folders. It is undoubtedly the best photo editing software, but it is also so massive that it needs an endurance test. The learning curve is not very steep, but it is accompanied by a hefty price tag. Another way to quickly fix any problem is with adjustment layers. Within Photoshop, you can create adjustment layers to adjust any color, size, shape or filter. When you do this, you can apply all the different tools to adjust the layer rather than simply creating a layer. The new Refresh Filters feature on Photoshop makes it quick and easy to change the look of all the layers used in an image. When working with layers to create a look, you can jump right to the filters for the most similar effect. Additionally, you can apply the same filter sets to multiple layers in one click. Every type of layer can be adjusted using this feature, from minor adjustments such as curves to major works of art such as Sketch. On Photoshop, you can now change the style of a found object using the new Replace Found Objects tool. This useful tool lets you quickly remove or replace an object found in the image, such as text, cartoons, logos, etc. The tool automatically detects nearly any type of found object, offering to replace it with the default of the image or change the style of it. Also on Photoshop, the new Unsharp Mask feature uses a combination of traditional sharpening and despeckle techniques to give images a “breath of life”, and the new Unsharp Mask Detail feature helps you control how Unsharp Mask kicks in, adjusting it for various levels of detail in the image. You can now easily make large-scale adjustments to the detail across the entire image with the new Detail Control tool. For more information, visit www.adobe.com/go/photoshoponline .
